VINCI steps up its road operations in North America

- VINCI Construction has acquired two roadworks and materials production companies: Newport Construction in the United States and Entreprises Marchand & Frères (EMF) in Canada
- These two companies generate full-year revenue of over 150 million
- They will boost geographic densification of VINCI Construction in North America

VINCI Construction has acquired two family-run public works companies in North America – Newport Construction based in New Hampshire in the US and Entreprises Marchand & Frères (EMF) in Canada.

- Newport Construction specialises in road works and small-scale civil engineering projects.

Operating in the south of New Hampshire and Massachusetts (primarily in the Boston region), the company is vertically integrated. It owns a quarry with nearly 50 million tonnes of materials and an asphalt plant.

Newport Construction employs 240 people and generated revenue of 105 million (US\$115 million) in 2023. This acquisition, which is in line with its vertical integration model, will enable VINCI Construction to bolster its public works operations in the north-east of the United States, where the division has been present since the acquisition of Lane Construction's roadworks activities in 2018.

- In Canada, Entreprises Marchand & Frères (EMF) is involved in road works in central Quebec and the Baie-James area located in the north of the province.

EMF is also vertically integrated, with three asphalt plants, nine quarries – representing nearly 20 million tonnes of materials reserves - and two sand quarries.

Employing 220 people, EMF generated revenue of
